

PRODUCT STRATEGY PITCH

Edtronaut B2B Enterprise Suite

Pivoting B2C job simulations into an Enterprise Recruitment & Onboarding engine. Business Analyst / Product Owner Case Submission.

CANDIDATE

BA/PO Intern Applicant

ROLE PATHWAY

Business Analyst / Product Owner

VERSION & DATE

v1.0 • June 2026

The Strategic Pivot & Pillars

Leveraging B2C S.O.R.A Assets

Edtronaut is redirecting its mature Job Simulation inventory into a scalable B2B ecosystem. Instead of selling direct-to-candidate, we package these simulations as high-fidelity assessment tools for companies.

This eliminates individual sales friction, driving recurring license revenue and boosting LTV.

Three B2B Business Pillars

- ✓ **Recruitment Automation:** Objective, performance-first screening to accurately assess incoming talent.
- ✓ **Structured Onboarding:** Standardized, role-based modules for rapid integration of new hires.
- ✓ **Targeted Upskilling:** Mapping real performance data to clear promotional pathways.

💡 **CORE STRATEGIC THESIS:** Move away from CV pedigree-based filtering. Power enterprise teams to secure and develop talent based on verifiable, simulation-proven execution capability.

B2B Problem & Strategic Goals

The Enterprise Talent Friction

- ✓ **CV-Performance Mismatch:** Traditional resumes fail to predict on-the-job execution, driving bad hires.
- ✓ **Fragmented Workflows:** Overhead cost is generated when jumping across siloed ATS platforms and generic coding tools.
- ✓ **Sourcing Delays:** Human-resource hours are squandered on manual reviews instead of engagement.

Strategic B2B Product Goals

- ✓ **Unified Hub:** Central dashboard displaying clear tracking across the candidate funnel.
- ✓ **Skill Score Visibility:** Direct insight into multidimensional competency metrics.
- ✓ **Rapid Selection:** Accelerate pipeline routing through standardized filters.
- ✓ **Human-in-the-Loop Safeguards:** Fast override toggles for manual candidate reviews.

PART A

Persona Mapping & Product Alignment

Defining deep ecosystem personas, key structural pain points, and target user stories across recruitment and personnel cycles.

B2B Ecosystem Persona Matrix

PERSONA	DAILY CONTEXT	TOP PAIN POINTS	CORE RISK / OBJECTIONS	SUCCESS TARGET
1. TA / Recruiter	High-volume sourcing under urgent timelines	Manual CV reviews; pipeline drop-off during rigid screening	AI scoring might overlook non-traditional profiles	Time-to-Hire -30%
2. Candidate	Applying for target specialist positions	Opaque processes; automated rejection with zero context	Long, dry simulations increase friction	Fast-tracked application
3. New Hire	Onboarding and role integration	Unclear initial targets; disjointed learning steps	Overwhelming tech curves without guidance	Immediate productivity
4. People Ops	Onboarding execution, compliance tracking	Scattered sheets; tracking updates takes days	Poor connection to internal HRIS tools	Autopilot check-ins
5. L&D Manager	Continuous team skill assessment	Cannot map baseline gaps to growth plans	Fails to prove direct training ROI	Objective skill logs
6. Employee	Seeking promotion and progression	Static training feels like boring administrative work	Extra workload distracts from daily tasks	Transparent growth

Hiring User Stories Backlog

Recruiter Epic Stories

US-01: Candidate Filter Engine

P0 EPIC

As a recruiter, I want to filter and rank candidates by overall AI simulation scores, so that I immediately focus manual evaluation on top performers.

US-02: Flow Manager Selector

P0 EPIC

As a recruiter, I want to switch between Simulation-First and Interview-First pipelines, to optimize pipeline candidate flow volume.

US-03: Bulk Invitation Engine

P1 CORE

As a recruiter, I want to trigger bulk tokenized email invitations, so that I reduce manual outbound administration overhead.

Candidate & Manager Epics

US-04: Secure Portal (Cand)

P0 EPIC

As a candidate, I want access to a secure, distraction-free environment with instructions, so that I can perform optimally.

US-05: Simulation Submissions

P0 EPIC

As a candidate, I want to submit work artifacts directly inside the environment, so that my functional engineering skills are verified.

US-06: Evaluator Notes (Hiring Mgr)

P1 CORE

As a hiring manager, I want to add collaborative notes on Candidate Detail Profiles, to align smoothly with recruiting teams.

PART B

Process Workflows & Decision Integration

Detailed system swimlanes, loop integration, edge cases, human-in-the-loop safeguards, and BPMN process architectures.

Hiring Automation Core Flow

Main BPMN Logical Flow

Automates the sourcing-to-interview loop, validating capability metrics at every turn.

- ✓ **Actors:** Sourcing Specialist, AI Engine, Recruiter, Hiring Manager.
- ✓ **Key Decision Node:** Flow Manager Route. Recruiter toggles between *Simulation-First* (mass screening) and *Interview-First* (targeted hiring).
- ✓ **Evaluation Node:** Candidate scores are checked against custom job thresholds.
- ✓ **Human Bypass Option:** Recruiter manual override allows candidates to proceed to evaluation even if they fall just below the threshold.

SYSTEM INTEGRATION NOTE

Webhooks automate state changes across modern ATS platforms (GreenHouse/Workday) instantly.

[PLACEHOLDER: Insert Workflow 1 Main BPMN — Hiring Automation]

BPMN showing: Ingestion, Flow Manager Route Split, Assessment execution loop, Score-checking gateways, and automated vs manual overrides.

Assessment & Interview Loops

[PLACEHOLDER: Assessment Flow BPMN]

Tracks the simulation cycle: dispatching, time metrics, automatic saving, and results sync.

[PLACEHOLDER: Interview & Offer BPMN]

Maps team consensus, calibration nodes, offer letters, and ATS updates.

Assessment Edge Cases

No Action Captured: Automated email notifications trigger 48h before the submission link expires.

Simulation Disruption: Automatic saves protect and recover progress in real time during outages.

Interview Edge Cases

Manager Reject: Routes profiles back to the pipeline, logging calibration feedback.

Rejection loop: Candidates who fail are sent targeted suggestions based on assessment gaps.

Onboarding & Upskilling Flows

[PLACEHOLDER: Onboarding Swimlanes]

Tracks milestones over the first 30 days: assigning, tracking, and grading sandbox simulations.

[PLACEHOLDER: Upskilling Swimlanes]

Tracks continuous talent mapping, skill evaluations, gap detection, and learning paths.

Onboarding Logic

Automated Action: Triggered directly by the ATS upon offer signature. Progress tracks are pushed to slack channels dynamically.

Growth & Upskilling Logic

Readiness Scoring: Employees scoring in high brackets automatically trigger talent flags to line managers for fast-track promotion.

PART C

PRD Spec & Dashboard Blueprints

Detailed system requirements, feature maps, schemas, UI blueprints, and Gherkin acceptance criteria for the core recruiting engine.

MVP Scope vs Phase 2 Roadmap

PRODUCT DOMAIN	MVP SCOPE (PHASE 1.0 RELEASE)	STRATEGIC PHASE 2.0 FEATURE BACKLOG
Candidate Engine	Comprehensive grid displaying aggregate evaluation records, stage tags, keyword search, and CSV export.	Two-way deep integrations with leading industry ATS systems (Greenhouse, Lever, Workday).
Flow Management	Simple, requisition-level binary pipeline switch (<i>Simulation-First vs Interview-First</i>).	Interactive drag-and-drop workflow configurator for custom multi-stage setups.
Evaluation Analysis	Clear competency breakdowns, technical skills scores, raw metrics, and AI summary logs.	Context-aware interview questions, cross-candidate benchmark indexing, and custom scorecards.
SaaS Reporting	Recruiter exports detailing complete search outputs in spreadsheet-friendly CSV format.	Automatic PDF generation containing comprehensive profile evaluation summaries for managers.
Access Control	Secure password and standard corporate email authentication.	Enterprise Single Sign-On integrations (SAML, Okta, Active Directory) and calendar sync.

Functional & Technical Specs

Functional System Scope

FR-01 Funnel Tracker: Clean representation of candidates across Applied, Invited, Completed, and Approved stages.

FR-02 Action Banner: Sticky, top-of-page notifications highlighting pending assessments ready for reviewer scoring.

FR-03 Candidate Detail Views: Comprehensive tabbed candidate card displaying history, evaluations, and interviewer logs.

FR-04 Direct Mail Invite: Bulk select and send unique invitation tokens to queued applicants with a single action.

Non-Functional Target Specs

NFR-01 Render Performance: Landing views and filters must process and display results in < 1.5 seconds for sets up to 10k items.

NFR-02 Sync SLA: Completed simulation records from the SORA engine must sync and update grids within 60 seconds.

NFR-03 Security & PII: Candidate personally identifiable info is encrypted at-rest and in-transit (AES-256 protocols).

NFR-04 Compliance: Standard support for GDPR deletion workflows ("Right to be Forgotten") via one-click profile purging.

UX Blueprints & Mockups

[PLACEHOLDER: Main Dashboard Grid Interface]

Shows key KPI summary cards, pipeline tracking bars, filters, and bulk status update controls.

[PLACEHOLDER: Candidate Profile Inspector Mockup]

Tabbed layout containing uploaded resumes, evaluation graphs, timeline activity feeds, and manager review logs.

Main Portal Rules

Features clean KPI metrics, and an active alerts banner at the top of the interface to prompt reviewers to score newly submitted tests.

Inspector Layout Rules

A split-pane container displays the candidate's resume on the left, alongside detailed simulation reports and AI summaries on the right.

Delivery Schedule & Metrics

📅 6-Week Delivery Schedule

Sprint 1 (Weeks 1-3): Foundation

- Build backend schemas & API routes.
- Create main dashboard UI grid.
- Integrate SORA engine scoring mock.

Sprint 2 (Weeks 4-6): Interactive Features

- Build candidate detail profiles.
- Implement email invite pipeline.
- Comprehensive testing & launch.

🛡️ Sourcing Risks & Mitigation

Integrations Delay: Use early contract-based API mocks so front-end and back-end tracks can progress independently.

User Resistance: Ensure frictionless CSV exports are supported from day one to match legacy tools.

📊 30-Day Launch Success

- Reach > 75% completion rate on sent links.
- Cut time-to-shortlist duration in half.
- Boost manager satisfaction ratings to > 80%.

Beyond CV Screening. Hire Through Demonstrated Skills.
